TECHNOLOGY

Sendflex Parcel TMS

Secure, SOC 2 Certified

FEATURE BRIEF

Finally, a data-driven approach to managing final-mile shipping that combines the intelligence of freight TMS with high-speed parcel processing.

Optimization tools make it easy for logistics managers to control increasingly complex B2C fulfillment processes.

Configure in minutes what would otherwise take weeks of expensive business rule programming to accomplish. Process thousands of instructions and rates/second.

Optimize Cost Savings, Capacity, and Customer Delivery Experiences

Managing B2C shipping is more complex than ever. More carrier services, higher costs, and meeting customer delivery demands requires a level of automated intelligence that is unavailable in legacy shipping systems without expensive customizations.

That's why eCommerce, retailers, distributors, and 3PLs are turning to Sendflex, the first cloud-native parcel TMS platform that offers a new approach to B2C shipping. We help you conquer complexity.

Move Beyond Carrier Label Printing

Sendflex provides managers with the ability to optimize planning across orders upstream from shipping and then run "what if" simulations based on historical shipping data to create forecast models.

No-code instructions simplify complex processes.

Flexible, Versatile, Secure

Sendflex is SOC2 certified, providing a secure environment for logistics managers to stay ahead of the competition. Our no-code configuration utilities help you constantly improve control over costs, capacity utilization, sustainability, and customer delivery. And without expensive programming and long project timelines.

KEY FEATURES

Connect
No-code connectivity tools make it easy to onboard parcel, LTL, and local carrier services, as well as other 3rd party logistics web service providers, IoT devices, and data sources.

Instruct
Core to our parcel TMS platform is the ability for non-programmers to create powerful optimization instructions, using wizards and drop downs. Change optimization instructions in minutes and measure their impact with planning, simulations, and forecasting tools.

Plan
Our planning workbench and super fast rating and routing engine (20k+ rates & instructions per second) enables you to look across orders, rank carriers, and create cost-effective plans and simulations based on configurable instructions.

Execute
Automate rate quoting, cartonization and shipping across all your DCs, stores, mail centers and drop ship points. Optimize cube utilization. Track and capture PODs.

Monitor
Sendflex helps you monitor real-time activity so you can comply with carrier pickup limitations and tier incentives. Monitor exceptions, performance, and productivity across your enterprise.
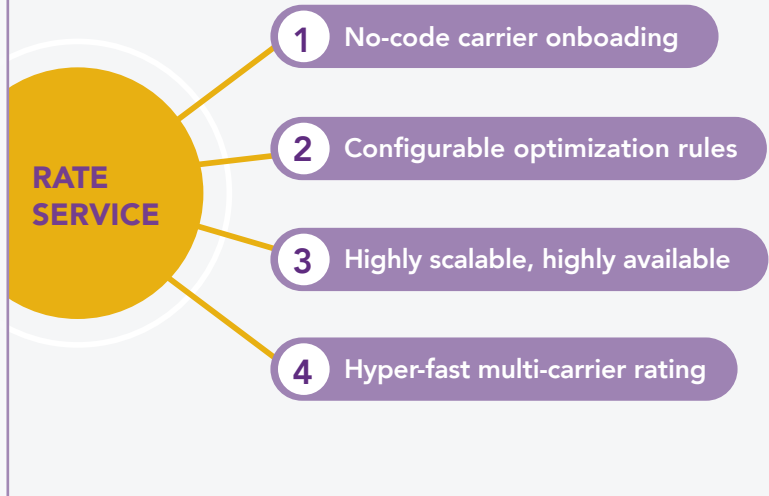

Simulate
Graphs and reports that tell you what happened are nice. But wouldn't it be helpful to analyze historical data in terms of "what-if" models and run forecasts? Now you can gain insights and find continuous improvements with Sendflex's Simulator.

sendflex
TECHNOLOGY

Super Fast Multi-Carrier Rating

Sendflex's on-board carrier rating and time in transit service eliminates reliance on slow and unreliable carrier APIs.

Quote freight costs, optimize plans, run simulations, and build forecasts at speeds reaching thousands of carrier rates and optimization instructions per second.

RATE SERVICE

1 No-code carrier onboading

2 Configurable optimization rules

3 Highly scalable, highly available

4 Hyper-fast multi-carrier rating

Sendflex Apps and API Automate Processes, From Purchase to Payment

Our enterprise-class parcel orchestration platform provides the controls you need to optimize cost reduction, capacity utilization, sustainability, and your customer delivery experiences.

ORDER ENTRY
Calculate accurate shipping quotes and transit times in order entry & shopping carts.

ORDER MANAGEMENT
Automate omnichannel fulfillment and freight consolidation processes.

FULFILLMENT
Determine the most transportation cost-effective packing method.

MANAGEMENT
Create plans, forecasts and shipping cost models using no-code instructions.

CUSTOMER SERVICE
Make and keep delivery promises. Automate tracking and POD capture.

OMNICHANNEL SHIPPING
Execute parcel, LTL, and local carrier shipment from stores, DCs, and drop ship points.
